

Job Title: *Engineering Technician*

Job Description:

The Engineering Technician will utilize, build and/or adapt unique test equipment for complex tests using independent judgment, after suitable training on each task. Duties include applying working knowledge of applicable test requirements and performing tests using general laboratory equipment and routine care of designated test equipment and work area, as well as operate a computer to extract/input readily available information and to use available software. The technician will be responsible for examining test samples, reading measuring instruments and reviewing test data with supervisor; reading and interpreting schematics, wiring diagrams, and operational instructions, operating designated instruments that may include electrical test equipment, temperature measuring devices, microwave probes, impedance analyzers, noise analyzers, network analyzers and spectrum analyzers, multi-meters, hand tools, oscilloscopes and special laboratory equipment as directed. The person will also be responsible for assembly of electronic circuits and related test fixturing, in addition to customized test setups. This position allows for some flexibility in work schedule, and begins as a part-time position with full-time potential.
