

## Announcing the Modelithics® Qorvo GaN Library v2.0

The Modelithics® Qorvo GaN Library is a steadily growing set of non-linear models for Qorvo package- and die-format GaN devices, designed for excellent accuracy, and validated with broadband S-parameters and load pull data at multiple frequencies. Each model has a detailed datasheet summarizing model features, development details, and model performance plots. Some devices are also represented with small-signal and noise models in addition to non-linear models.

The Modelithics Qorvo GaN Library, **v2.0** is now available for download from the Modelithics website. A new model has been added for the **Qorvo QPD1000** 15W, 0.03-1.215GHz packaged GaN Transistor. This release of the model library contains models for 17 die-format GaN devices ranging from 2W to 90W, 6 small-signal versions of large-signal die device models, and 40 packaged transistor devices ranging from 5W up to 400W.
