Modelithics Cloud Licensing

Transform Your License Support with a Modelithics Cloud Based License!

To assist in the ease of the licensing process for a Modelithics license, a Cloud Based option is available for floating licenses. A cloud license is similar to a floating license; however, it greatly reduces IT support needed. It removes the need for IT overhead to update and maintain the license server, upgrades, adding new seats, etc. All license administrative activities are handled by Modelithics. License configuration on the client is simplified to saving a file. The client configuration is done once, and all licensing updates are handled in the cloud by Modelithics.

With the Cloud Based option, a Customer Cloud Portal is offered to provide the ultimate software user, to view your licenses and license servers. The Customer Cloud Portal contains the ability to view licenses and servers associated with your company.

The Customer Cloud Portal includes:

- **Your Personal Dashboard**
  - This screen allows you to query the status of the server, view usage statistics on the server, and view the configuration of the server.
- **Log Tabs**
  - Allows you to view the debug and report logs from your license servers.
- **Profile Tab**
  - Allows you to edit the email address associated with your account or change your password.
- **Reports Tab**
  - Showcases the view usage-over-time reports for the licenses on this server.

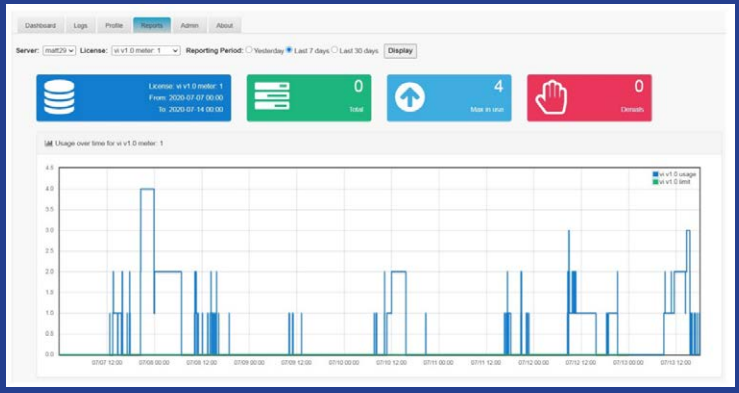

Logs Tab

The Logs tab allows you to view the debug and report logs from your license servers.

Reports Tab

Clicking on the "Reports" tab allows you to view usage-over-time reports for the licenses on this server.

Cloud licensing delivers more flexibility and reliability, increases performance and efficiency, and helps to lower IT costs!

Contact sales@modelithics.com to discuss the Cloud Based license option!
